1. (Currently amended) A method, in a requested file system server, for servicing a request, comprising:

receiving a request for a referencing object from a client, wherein the referencing object refers to a referenced file system that has been moved;

using information from said referencing object to look ~~looking~~ up a location of the referenced file system in a separate data structure; and

returning a redirection message indicating the location of the referenced file system to the client.

13. (Original) A method, in a requested file system server, for servicing a request, comprising:

receiving a request for a file system object, wherein the request includes an encoded file system identifier;

 decoding the encoded file system identifier to form a file system identifier corresponding to a requested file system;

looking up a path for the requested file system in a file system identifier data structure; and

retrieving the root of the requested file system using the path for the requested file system.
